

Machine Name : Second-hand Taiwan Hartford 3150 gantry machining center surrounded by CNC second hand gantry milling machining center

Brand : Taiwan Hartford

Machine Model : 3150

**Stock No. :
85332f37c35fd0b683edf75a1d02619e**

Ex-factory Date :

Main Technical Parameters:

Brand: Taiwan Xiedhong Product features: Boring and milling old degree :8 into the new drive mode: mechanical drive main motor power :15kw maximum grinding size :100mm automation degree: automatic weight :12000kg footage :4000mm of machining accuracy :0.001mm Worktable size :3000*2200mm Equipment location: all National equipment production place: Jiangsu, Henan available for sale: National type: milling machine Model :3150

Wuxi Xiran company is located in Wuxi, Jiangsu province, engaged in the recovery and sales of second-hand machining center, second-hand lathe, second-hand boring machine, second-hand gantry milling machine and other incurable machine tools. Many manufacturers' incurable machine tools are purchased from our company, and at the same time, we provide second-hand machining center, gantry milling machine, boring machine and grinding machine. We can go to the scene to see the goods at any time. A new sales model is being verified, users can better understand the network purchase machine tool, convenient, fast, safe and more thoughtful service.

Gantry milling machine is a kind of workpiece milling machining of steel mill, can machining complex profile, higher efficiency than planer, in the mechanical manufacturing and repair department has been applied, according to the different uses of milling machine, can be classified as follows, according to the structure can be divided into the following types of milling machine, desktop milling machine: small milling machine for milling machine instruments, instruments and other small parts.

CNC gantry machining center is developed from the CNC gantry CNC. The difference with CNC gantry milling machine is that the CNC machining center has a more than a Tool magazine, that is, the ability to automatically exchange transmission machining tools. By installing different purpose tools on the Tool magazine, the transmission machining tools on spindle can be changed in a clip through the automatic tool change device, to achieve a variety of transmission machining functions, which greatly improves the transmission machining speed. machining center is on the basis of CNC gantry milling machine according to the actual situation add a CNC.
